Bengaluru, Karnataka, India

Education

Jul 2019 - Jun 2023
B.E in Electronics and Communication Engineering
Global Academy of Technology (VTU)

Jun 2017 - Apr 2019
PUB in PCMB 72.4 %
PES PU College

Jun 2007 - Apr 2017
School 10 CGPA
St. Paul's School (CBSE)

Technologies

- GIT
- Linux
- Shell / Bash
- Visual Studio 2022
- AWS Basic
- Python
- MonoRepos

Language

Kannada English
Hindi Telugu

MUKESH T S

Driven by the desire to develop efficient, innovative, maintainable, and easily upgradable applications in collaboration using Node.js, React.js and .NET solving real problems and continue expanding my expertise in the ever-evolving tech landscape.

Skills

Work History

Software Engineer TypeScript, Express, MongoDB, Node.js, React.js
WebSpruce From Apr 2025

- Implemented backend solutions for School and University ERP platforms using Node.js and TypeScript to increase efficiency at educational institutions.
- Developed a real-time resource management system and timetable module for the University ERP, optimizing classroom and faculty scheduling to enhance campus productivity.
- Built a versatile fee management system, enabling seamless handling of complex fee structures, payment tracking, and automated payment remainders.
- Designed a dynamic exam module for the School ERP, streamlining exam scheduling, attendance tracking, and marks reporting with exportable Excel and PDF outputs.
- Enhanced application security by implementing a refresh token system using session tokens safeguarding inactive session.
- Orchestrated the migration of the School ERP database to a newer MongoDB schema, maintaining data accuracy and boosting system performance.
- Enhanced user interfaces with React, MUI, and Tailwind CSS, delivering responsive.

Junior Software Engineer, C#, ASP.NET, EF, SQL, Datadog, Terraform
Cognizant Technology Solutions, Hyderabad From Dec 2023

- At Agero, Implemented minor enhancement in backend which included fixing bugs, functionality changes and tracking progress in JIRA.
- Processing Excel file for a template and extracting data using JavaScript reducing efforts up to 2-3 hours per employee weekly.
- Created monitors and Dashboards in Datadog and Splunk for our application for overall observability by extracting parsing data from logs and Terraform reducing fault identification up to 70%.
- Participated in Scrum meetings, code reviews, and JIRA-driven sprints to ensure high-quality code. And documented APIs and error triaging process for other teams.
- Maintain uptime and manage the of our APIs in AWS by creating auto-scaling rule, terminating degraded servers, configuring On-call in PagerDuty.
- Participated in Retrospective meetings assess the successful deliverables and areas of improvements.

- Studied agile principles and Scrum practices for effective project management and team collaboration. Learned web application security best practices to identify and mitigate vulnerabilities based on OWASP guidelines.
- Acquired practical knowledge of AWS services (EC2, S3, SDK) and cloud concepts like load balancers, auto-scaling and target groups.
- Gained foundational knowledge of Python programming for scripting and backend development.
- As a trainee I was trained in CS Basics, ASP.NET Framework and related technologies, which I demonstrated through projects and presentations.
- Designed GoContacts Modules with 5NF principles built the web app for contact management using ASP.NET MVC, Entity Framework, SQL Server and Razor Views enabling user authentication and label-based categorization, admin dashboard.

Frontend Developer, JavaScript, HTML, Tailwind, Shopify **Marmeto Enabling Commerce, HSR Layout [🔗](#) Jul 2023 – Nov 2023**

- Developed responsive Knot Homes' Product Details Page with dynamic price updates on selection, image changes, and add-to-cart functionality.
- Directly engaged with client and understood the client requirement to developed responsive home page for Virgio using Tailwind CSS and scroll effect inspired by Zara (later removed).
- Fixed API consumption, alignment, external API usage and responsiveness bugs for stores like MTR, Cycle, and OrientElectric where used JavaScript.
- Tracked tasks and time using Monday.com for efficient project planning.
- During training developed mukesh-ts-store in which all the expected page like product page, collection page, etc was developed using JS and tailwind like helpers according to design reference.

Outside Work

- Solved 250+ DSA problems on LeetCode and GeeksForGeeks across following topics arrays, strings, binary search, bit manipulation, linked-list, recursion, stack and queues, sliding window, two-pointers.
- DrawInSync(InProgress): A personal project in progress, a collaborative webapp where multiple users can draw on same board simultaneously. Using technologies NextJS, Express, Postgrese (Prisma), WebSocket, TurboRepo, TailwindCSS, Zod.
- Brainsily(Deployed): A personal project, notes keeping app for organizing and accessing your favorite content. Manage your content of types like (Tweet, YouTube, Text) and share it publicly. Used Node.js, TypeScript, React, Mongoose, Zod, etc.
- GoContacts: At Cognizant I developed GoContacts, which offers managing contacts in a modern web environment. GoContacts is a dynamic Web Application developed with ASP.NET MVC 5, Entity Framework, and LINQ, utilizing MS SQL Server as database. The application empowers users to efficiently store, edit, and categorize contacts using customizable Labels. BS5 for UI, Identity Framework for user and Visual Studio 2022.
- TSM Lifestyle: At Marmeto I developed Ecommerce store with lifestyle products which includes Product-Details page with multiple variants, Collection page, Cart Drawer and more. Built on Shopify backend, with CSS-Flex, Base helper CSS and Vanilla JavaScript from scratch.
