MUKESH T S

Driven by the desire to develop efficient, innovative, maintainable, and easily upgradable applications in collaboration using Node.js, React.js and .NET solving real problems and continue expanding my expertise in the ever-evolving tech landscape.

Skills

Work History

Software Engineer TypeScript, Express, MongoDB, Node.js, React.js
WebSpruce From Apr 2025

- Implemented backend solutions for School and University ERP platforms using Node.js where I built a versatile fee management system, enabling seamless handling of complex fee structures, payment tracking, and automated payment remainders.
- Designed a dynamic exam module for the School ERP, streamlining exam scheduling, attendance tracking, and marks reporting with exportable Excel and PDF outputs.
- Enhanced application security by implementing a refresh token system using session tokens safeguarding inactive session.
- Orchestrated the migration of the School ERP database to a newer MongoDB schema, maintaining data accuracy and boosting system performance.
- Built components such as faculty available table, notification system, etc using React, MUI, and Tailwind CSS.

Junior Software Engineer, C#, ASP.NET, EF, SQL, Datadog, Terraform
Cognizant Technology Solutions Dec 2023 - Mar 2025

- At Agero, Implemented minor enhancement in backend which included fixing bugs, functionality changes, etc.
- Wrote JS scripts to process Excel file for a template and extracting data reducing efforts up to 2-3 hours per employee weekly.
- Created monitors and Dashboards in Datadog and Splunk for our application for overall observability by extracting parsing data from logs.
- Created useful queries and alerts using Terraform (for declarative infra) reducing time taken to fault identification up to 70%.
- Participated in Scrum meetings, code reviews, and JIRA-driven sprints to ensure high code quality. And documented APIs and error triaging process for other teams.
- Maintain uptime and manage the of our APIs in AWS by creating auto-scaling rule, terminating degraded servers, configuring On-call in PagerDuty.
- Participated in Retrospective meetings and assessed the successful deliverables and areas of improvements.
- Studied agile principles and Scrum practices for effective project management and team collaboration. As well as OWASP guidelines to mitigate vulnerabilities in web application.

- Acquired practical knowledge of AWS services (EC2, S3, SDK) and cloud concepts like load balancers, auto-scaling and target groups.
- Gained foundational knowledge of Python programming for scripting.
- As a trainee I was trained in CS Basics, ASP.NET Framework and related technologies, which I demonstrated through projects and presentations.
- Designed GoContacts Modules with 5NF principles built the web app for contact management using ASP.NET MVC, Entity Framework, SQL Server and Razor Views enabling user authentication and label-based categorization, admin dashboard.

Frontend Intern

JavaScript, HTML, Tailwind, Shopify Liquid

Marmeto Enabling Commerce [🔗](#) Jul 2023 – Nov 2023

- Developed responsive Knot Homes' Product Details Page with dynamic price updates on selection, image changes, and add-to-cart functionality.
- Directly engaged with client and understood the client requirement to developed responsive home page for Virgio using Tailwind CSS and scroll effect inspired by Zara (later removed).
- Fixed API consumption, alignment and responsiveness bugs for stores like MTR, Cycle, and OrientElectric.
- Tracked tasks and time using Monday.com for efficient project planning.
- During training developed mukesh-ts-store in which all the expected page for an e-commerce like product page, collection page, etc was developed using JS and Tailwind CSS according to design reference.

Other Work

- Solved 250+ DSA problems on LeetCode and GeeksForGeeks across topics like arrays, strings, binary search, bit manipulation, linked-list, recursion, stack and queues, sliding window, two-pointers.
- DrawInSync(InProgress): A personal project which is a collaborative web-app where multiple users can draw on same board simultaneously. Using technologies NextJS, Express, Postgres, WebSocket, TurboRepo, TailwindCSS, Zod, etc.
- Brainsily(Deployed): A notes keeping app for organizing and accessing your favorite content. Manage your content of types Tweets, YouTube vid, text, etc and share it publicly. Used Node.js, TypeScript, React, Mongoose, Zod, etc.
- GoContacts: At Cognizant I developed GoContacts, which offers managing contacts in a modern web environment. Developed with ASP.NET MVC 5, Entity Framework, and LINQ, utilizing MS SQL Server. The application empowers users to efficiently store, edit, and categorize contacts with customizable Labels. Used Bootstrap for UI, Identity Framework for user and Visual Studio.
- TSM Lifestyle (Deployed, pass: sEcure): At Marmeto I developed Ecommerce store with lifestyle products which includes Product-Details page with multiple variants, Collection page, Cart Drawer and more. Built on Shopify backend, with Tailwind CSS and Vanilla JavaScript from scratch.
