Professional Summary

Experienced NodeJs Full Stack Developer with 2 years of expertise in developing enterprise-level applications who is driven by the desire to develop efficient, innovative, maintainable, and easily upgradable applications in collaboration using Node.js, React.js and .NET solving real problems and continue expanding my expertise in the ever-evolving tech landscape.

EXPERIENCE

Full Stack Developer

Apr 2025 – Present

WebSpruce Software Solutions

Bengaluru, Karnataka

- Designed and leading an Internal tool ENFA project where in using Postgres (drizzle), Redis, NodeJs, React-Query, Shaden, etc.
- Implemented backend solutions for School and University ERP platforms using Node.js
- Built a versatile fee management system, enabling seamless handling of complex fee structures, payment tracking, and automated payment remainders.
- Designed a dynamic exam module for the School ERP, streamlining exam scheduling, attendance tracking, and marks reporting with exportable Excel and PDF outputs and reducing efforts of 2-3 hours every week.
- Designed a dynamic exam module for the School ERP, streamlining exam scheduling, attendance tracking, and marks reporting with exportable Excel and PDF outputs.
- Built page for faculty available table, school fee overview, etc using React, MUI, and Tailwind CSS.

Junior Software Engineer

Dec. 2023 – Mar 2025

Cognizant Technology Solutions

Coimbatore, Tamil Nadu

- At Agero, Implemented minor enhancement in backend which included fixing bugs, functionality changes, etc.
- Wrote scripts to process Excel file for a template and extracting data reducing efforts up to 2-3 hours per employee weekly.
- Created monitors and Dashboards in Datadog and Splunk for our application for overall observability by extracting parsing data from logs.
- Created useful queries and alerts using Terraform (for declarative infra) reducing time taken to fault identification up to 70%.
- Participated in Scrum meetings, code reviews, and JIRA-driven sprints to ensure high code quality. And documented APIs and error triaging process for other teams.
- Studied agile principles and Scrum practices for effective project management and team collaboration. As well as OWASP guidelines to mitigate vulnerabilities in web application.
- As a trainee I was trained on .NET using which I designed GoContacts and built the web app for contact management using ASP.NET MVC, Entity Framework, SQL Server and Razor Views enabling user authentication and label-based categorization, admin dashboard.

Frontend Intern

Jul 2023 – Nov 2023

Marmeto Enabling Commerce

Bengaluru, Karnataka

- Developed responsive Knot Homes' Product Details Page with dynamic price updates on selection, image changes, and add-to-cart functionality.
- Directly engaged with client and understood the client requirement to developed responsive home page for Virgio using Tailwind CSS and scroll effect inspired by Zara (later removed).
- Fixed API consumption, alignment and responsiveness bugs for stores like MTR, Cycle, and OrientElectric.
- Tracked tasks and time using Monday.com for efficient project planning.
- During training developed mukesh-ts-store in which all the expected page for an e-commerce like product page, collection page, etc was developed using JS and Tailwind CSS according to design reference.

OTHER WORK

- DrawInSync** | *NextJS, Express, PostgreSQL, Docker* Incomplete
- A personal project which is a collaborative drawing board where multiple users can draw on same board simultaneously.
 - Used websockets for realtime updates. And canvas 2d for board.
- Brainsily** | *Node.js, TypeScript, React, Mongoose* Dec 2023
- A notes keeping app for organizing and accessing your favorite content. Manage your content of types Tweets, YouTube vid, text, etc and share it publicly.
- TSM Lifestyle** | *JavaScript, HTML, Tailwind, Shopify Liquid* Jul 2023 – Aug 2023
- At Marmeto I developed Ecommerce store with lifestyle products which includes Product-Details page with multiple variants, Collection page, Cart Drawer and more. Built on Shopify backend, with Tailwind CSS and Vanilla JavaScript from scratch.
